Metallic Papers

Mirri Digital

Print short-run metallic effects with no special inks

Manufactured using an exceptionally high-quality film, the metalized surface exhibits a brightness that provides a mirror-like finish, further enhanced by the smoothness of the cast-coated board to which it is laminated. With the metalized surface protected by a polyester film, this construction has a high surface energy that offers an excellent key for inks and adhesives.

Mirri Digital's bright, glossy finish allows you to print short-run metallic effects with added dimension and value, without the need for special inks. You can print this stock with white ink to achieve a foil-stamped appearance and for extra special effects.
